

October 26, 2020

As one of the world's leading law firms, we are, in common with many other organisations, progressively developing our approach to tackling climate change within our business and relationships. We offer advice and guidance to our clients on how to address the impact of their business on the environment. This impact relates not only to compliance with environmental legislation in their own operations, but beyond to the relationships they have with their customers, suppliers, investors and other stakeholders.

We have a long track record in advising on renewables and in shaping ground-breaking new approaches to support advances towards a more sustainable world. The work we take on for clients is increasingly in the renewables and clean-tech arena; and we use our experience from this work to help more traditional energy companies transition away from fossil fuels. Faced with the global climate crisis, we are deeply conscious of our responsibilities as a leading law firm and committed to playing our part in building a better world for all of us today, and for future generations.

In the course of this work we have become the top ranked law firm for renewables financing globally. This has seen us advise on more than 20 renewable energy projects in the US, including a 250MW wind farm project in Texas, and 125+ green energy projects across the Americas region, including wind, solar, hydro and geothermal. We have helped to break new ground many times, such as helping an international airline to offset carbon emissions from fuel used on flights; the record-breaking single renewable asset project financing of the world's largest offshore wind farm; the first green sovereign sukuk; and advising an energy major on its pioneering, sustainability-linked revolving credit facility, as the organisation moves towards meeting the aims of the Paris Agreement. We have also worked with many other major global finance and resources businesses to help them as they pivot towards becoming net-zero organisations, and aligning their broader businesses to the Paris goals.
