

- 1) *What studies have you conducted in order to assess the social and environmental impacts of this project, how did you consult with potentially affected stakeholders, and have such studies been made publicly available?*

Marubeni Corporation (Marubeni) is currently requested to submit the proposal of engineering, procurement and construction (EPC) for the ultra-super critical coal-fired power plant in Hamrawein, Egypt (Project) by May 1, 2017. The relevant studies on the social and environmental impacts shall be prepared at a later stage.

- 2) *If such studies have not yet been conducted, will they be conducted if your bid is successful, and will the results be made publically available?*

The social and environmental impacts study will be conducted by the client, Egyptian Electricity Holding Company (EEHC). However, the consortium will be happy to support them as the EPC contractor.

- 3) *What policies (if any) did your bid contain to ensure that the operation of the power plant will not have a negative effect on human rights (such as impacts on health for local residents), and on climate change?*

The proposal shall be in compliance with the relevant local regulations and international lender's requirements.

- 4) *Does your company have a plan to reduce or eliminate emissions from the coal-fired power plants?*

In this Project, Marubeni, as a member of consortium, may not be responsible for emission reduction system. However, the consortium shall prepare the proposal in accordance with the relevant local regulations and international lender's requirements.

- 5) *How does your bid take into account the particular portfolio risk exposure of projects that are reliant on coal, and how are you communicating such risk to your investors?*

As an EPC contractor, Marubeni has more than 100 GW contract records of construction power plant in this industry, of which coal-fired power plant accounts for 40 GW. We have been communicating our business situation timely and periodically and these are public in our website.

<http://www.marubeni.com/ir/>

For the avoidance of doubt, EEHC requests for the EPC proposal for the Project. Marubeni will be a bidder of this EPC tender and we will not own this power plant as IPP.
